- ✓ MVC 5 Years
- ✓ Web API 5 Years
- ✓ Dot Net Core 3 Years
- ✓ Entity Framework, SQL Server 5 Years
- ✓ JavaScript, jQuery, Html 5 Years
- ✓ Microservices 2 Years

ACADEMIC PROJECTS

- Title: Improved Next Web Page Recommendation using Multi-Attribute Weight Prediction(BE)
- Description:

Web page prediction is web usage mining by performing pre-processing of the data from a website. The need for predicting the user's needs in order to improve the usability and user maintenance of a website is more than marked nowadays, lacking proper guidance, a visitor often wanders aimlessly without visiting significant pages, loses attention, and leaves the site earlier than expected. When they access the network, a large amount of data is generated and stored in Web log files which can be used efficiently as many times users repeatedly search the same type of Web pages recorded in the log files. This series can be considered a web access pattern, helpful to find user behavior.

Through this personalized information, it's quite easy to predict the next set of pages the user might visit based on the previously searched patterns, thereby reducing the browsing time of a user

Technology: JSP, Servlet, MySQL. HTML.

- Title: Kolhapur Guide web-based application (Diploma)

- Description:

The Main aim of developing the Kolhapur Guide is to provide easy-to-access information about Kolhapur but also to provide information to the traveler for ease of travel in Kolhapur.
